

# Coaching: walking the road to quality together

## THE COMPANY: Nubi

Nubi is a financial company with a firm mission to change the way people view their finances. They affirm that applying creativity and innovation you can achieve disruptive products that make the difficult easy.

It is formed by a team of engineers, designers and entrepreneurs passionate about technology and innovation, who like great challenges, with the aim of achieving a paradigm shift in the way people manage their finances: having complete security and transparency. , have full control of their finances with a few clicks, provide an available service where and when people need.

Young growing company, bets on the future by partnering with companies as passionate about what they do as they are.

## THE CHALLENGE

Among its technological projects, the quality area in Nubi was absent. With three products in the financial market, Paypal, Transferwise and Ripple, and a new product coming soon, Nubi Cuenta, the idea of ensuring quality in them, both in the development processes and in the productive operations, was transformed into a self-demand requirement, convinced of the extra value that can be added to their product portfolio indirectly.

Nubi calls us to organize the QA area, cross-sectional to all its products, with common processes and practices.

“

At NUBI we have the challenge of developing the QA team with the right number of people for the projects we have, with the professional quality that is needed and with the necessary tools to achieve the quality that we seek. We walk this path together with our partners, Crowdar.

**Mariano Chiavetti**  
COO / CTO

”

## THE SOLUTION

Crowdar began their work in Nubi analyzing the development processes, the products, and proposing and implementing testing solutions, while in parallel he collaborated with the company in the assembly of the QA Staff.

One project at a time, existing QA best practices were enhanced, viewing test reports, and defining new tests where they did not exist.

Although manual testing remains a necessary process, its automation has been improved, using Lippia in solutions from scratch and adapting existing test reports to view them on Klov, the report server.

Paypal has the Front-end smoke tests 100% automated by Nubi-Crowdar, integrated them into the Stage pipeline (pre-production environment). We are going the same way with tests of APIs of Ripple, and front and backend of Nubi Cuenta..

The adoption of these new QA practices empower the teams that were directly involved, making product development, testing and production commissioning much more agile.

## PROJECT HIGHLIGHTS

Duration: 9 months

Scenario: Analysis and definition of testing processes, team support in improving these processes

Team: 1 QA Manager, 1 Application Architect, 1 QA Automation Sr.
